

Digital Pressure: The Role of Social Media Influencers on the Purchasing Decisions of Ateneo de Davao University Senior High School Students

Alba, Calora, Dacup, Feniza, Galicia, Hilario, Macunlay

INTRODUCTION

The research examined the relationship between social media influencers and the purchasing decisions among senior high school students at Ateneo de Davao University. It highlighted the role of influencer marketing on social media in different marketing strategies and its effects on students' psychological factors in purchasing decisions. Understanding these dynamics was crucial for addressing the digital pressure students face and for tailoring effective marketing strategies to their needs and behaviors.

LITERATURE REVIEW

On the social media influencer marketing strategies:

Berman (2016) elaborated on the two important actors in **referral marketing strategy**: referrers and referred customers.

Affiliate marketing strategy includes the firm's offering of compensation to third-party influencers to promote their products or services (Nguyen, 2022)

On the psychological factors engaged before purchasing products being marketed by social media influencers:

Motivation
(Xiao et al., 2023)

Perception
(Deniz et. al, 2022)

Attitude & Beliefs
(Smith & Johnson, 2018)

Learning
(Rani, 2014)

METHODOLOGY

Variables	R-value	Interpretation	P-value	Accept/Reject Hypothesis	Correlation
Referral Marketing and Motivation	0.3933	Low Positive Correlation	0.000	Reject	There is a significant relationship
Referral Marketing and Perception	0.3647	Low Positive Correlation	0.000	Reject	There is a significant relationship
Referral Marketing and Attitude & Beliefs	0.4031	Low Positive Correlation	0.000	Reject	There is a significant relationship
Referral Marketing and Learning	0.4346	Low Positive Correlation	0.000	Reject	There is a significant relationship

Variables	R-value	Interpretation	P-value	Accept/Reject Hypothesis	Correlation
Affiliate Marketing and Motivation	0.3213	Low Positive Correlation	0.000	Reject	There is a significant relationship
Affiliate Marketing and Perception	0.3255	Low Positive Correlation	0.000	Reject	There is a significant relationship
Affiliate Marketing and Attitude & Beliefs	0.2951	Negligible Correlation	0.000	Reject	There is a significant relationship
Affiliate Marketing and Learning	0.3930	Low Positive Correlation	0.000	Reject	There is a significant relationship

There is a weakly significant relationship between social media influencers' marketing strategies and the psychological factors influencing students' purchasing behavior, suggesting that, despite the prevalence of influencers, their tactics do not directly affect the respondents' purchasing decisions. This shows that the Ateneo de Davao University Senior High School students consider several factors before making a purchase, and that the learning approach is mostly engaged among the four psychological factors considered, yet it remains weak, despite the two marketing strategies used by social media influencers.

RESULTS OF THE STUDY

CONCLUSION
